

Sectioning commands with critical notes in parallel columns

December 13, 2015

This file provides examples of using sectioning commands with `reledpar`. The section titles are in the line numbering, and have critical notes.

The left and right sides are put in columns. We use `\eledsectnotoc{L}` to say we want the right titles be added to the table of contents, and not the left titles. We also use `\eledsectmark{R}` to use the right side to add \LaTeX marks for headers.

We use the `\reledxxx` commands, each of them in their own `\pstart...\pend` group.

Page clearings are manually added before chapter with `\beforeeledchapter`.
